

# CSIT 337

# Midterm

# Project

100% of work done by Zakary Macejka

# Hardware and software used in this project

To complete this project all code was written and tested in IntelliJ. Further testing was done in external browsers such as Microsoft Edge.

# Features implemented

I feel that this project was very successful and contains all required elements and features. As shown below a custom logo with each functional tab was included while also accommodating a hamburger tab for if the device size is small enough.
